

ARE YOU AN INVESTOR? **WE'RE FUNDRAISING!**

We're raising £295,000 to develop physical trading cards, an app to manage users digital assets, an NFT exchange platform where players can trade their cards and games where players play against each other to fight and win Bitcoin.

REVENUE STREAMS

New limited edition series of digital and physical trading cards every three months

Merchandise: toys, clothes, posters, comics, cartoons etc.

License the Battle System to other creators & brands

Penny Arcade revenue

HIGH LEVEL CONCEPT

BitcoinSV is not understood by a range of consumers and suffers from lack of consumer engagement

Gamers, crypto-enthusiasts and collectors are either not aware of BSV, or do not understand how flexible, powerful and exciting the technology is.

Ninja Punk Girls proposes to capture the imagination of a whole generation of young people who love Bored Apes and similar crypto/NFT culture, and bring them into BitcoinSV.

To do this, we suggest building the following:

A flagship brand of highly functional NFT playing cards that is fun to play, collectible and profitable for the consumer

A trading card game and game wallet that allows them to hold and play with their cards with other players

An exchange that allows them to buy, sell and swap trading cards built on STAS token technology

An arcade-style fighting game that allows gamers to use their NFTs in real time, to battle for pennies

Ninja Punk Girls vs The Evil Eroboitz is an NFT trading card game and battle system built on the BitcoinSV blockchain. The company takes 7% revenue on every card traded and players pay to play plus stake elements of their characters or place bets on the outcome of the game. We call this model 'penny battling'.

Penny Battling has the potential to become a huge part of the casual games industry, but it's previously been impossible to realise due to a lack of micropayments technology.

BitcoinSV solves this and makes the concept of Penny Battling a possibility at scale. It's a ripe new market.

To test demand we released 50 copies of 13 unique characters in Series One.

SERIES ONE ***[NINJA PUNK GIRLS]***

Cards are available at: <https://tinyurl.com/NPGSeries1>:

SERIES TWO

Series 2 consists of 3,333 generative cards with a unique QR address on every card linking that card to its own public address on the blockchain.

At this address we 'nest' weapon NFTs, clothing NFTs accessory and hair NFTs so players can win these nested NFTs off each other.

When a card loses all its elements it transfers to the winning player.

PROGRESSION OF THE BUSINESS

NPG NFTs will act as tickets to “Penny Arcade” 3D Fighting Games where players play against each other for money.

Battles cost 10p to play and the winner takes a proportion of the loser’s stake. NPG LTD takes a percentage on every game played but we also leverage NFT technology in other ways to expand our market.

For example, NFTs can represent legal claims on streaming revenues so NFT owners become ‘sales agents’ who receive commissions and dividends.

Series 2 contains 400 individual elements which can be traded and won
In future series we plan to work with real fashion labels to create the clothes and accessories

400 Individual Elements

The Battle System allows players to stake elements of their cards when they play against each other much like 'Top Trumps'. Cards are priced low, but they accumulate value as they win more battles

Unique Battle System

Nested NFTs are hosted and controlled by NPG LTD. at a public address unique to every card. Thus, each card acts as a mini 'hosted wallet' with multiple NFTs inside it.

Nested NFTs

These constituent NFTs, when won off an opposing player Can be listed on the NPG exchange site "NPGeX" and sold for profit, or added to a player card to make it stronger

PHYSICAL NFT TRADING CARDS

Phase 4 of the Ninja Punk Girls business plan is to create and produce physical trading cards which contain 6 opportunities to battle against other players and win the constituent NFTs that are contained inside each card.

Cards also contain pennies worth of Bitcoin, much like scratchcards today, so that in the case that cards remain un-used, they appreciate in value over time as the price of BitcoinSV goes up. In this regard they function as 'micro-wallets', great for saving and collecting!

Additionally, NPG will partner with street fashion brands and other creators to provide winners with real fashionable items one in every 1000 cards.

Working with influencers:

A key part of the Ninja Punk Girl marketing strategy is to engage brand ambassadors and influencers that have been traditionally been outside BSV culture and incentivize them by turning them into real-life tradable NFT gaming cards.

We think there's an enormous market for these types of girls in the Metaverse and plan to Create Series 4 around real-life 'Ninja Punk Style Girls' such as these:

What we're asking for:

£145,000 to fund the creation of:

NPG Website: £8,000

Card Game App: £28,000

NFT Exchange: £28,000

2 more Card Series & 3D Cards : £30,000

Publicity: £50,000

**NINJA NIN
GIRLS**

£150,000

To fund the creation of a real-time Penny-Battling Arcade
Game that allows players to win BSV off each other

Multiple Revenue Streams:

NPG takes 7% on exchange fees of traded cards

New limited edition series every three months

Penny Arcade revenue

Merchandise: toys, clothes, posters, comics, cartoon etc.

License the Battle System to other creators & brands

The Goal:

To be the 'Crypto Kitties' of BitcoinSV
& sell a million NFT cards for £10 each

THE NINJAMIX GIRLS TEAM

The team is lead by CEO Richard Boase, original co-founder of the Satoshi Block Dojoa and 10 year veteran of the Bitcoin industry with CTO Alexander Breadman, a senior software engineer and Go-Lang cloud architect with 10 years experience building wallets, apps and exchanges for Bitcoin, and developer Javier Rodriguez, a specialist in Unity 3D and backend development.

ADVISORS AND MENTORS

We're supported in our journey by mentors from both the retail, business, blockchain and Bitcoin industry and from the world of comics and games. Retail Practice star Eva Pascoe, Melavika Solanka and Mel Tsiaprzis from Bitstamp as well as David Guppy, former CEO of the Beano. As we go forward we expect to forge strong industry ties and build out our community of experts and supporters, particularly in the game and NFT industries.
